This disease is an important cause of permanent and progressive disability when it is not treated in an early stage. Leprosy control is an instrument to find and treat all existing leprosy cases in a certain area, to bring them under treatment in order to prevent the disabling consequences of the disease. It is essential to consider the cultural, the social, the political, and the economical aspects in the context of leprosy in Nepal to meet the real need of each individual patient. Due to the agricultural background of almost 93 % of Nepal's population, this field needs special attention as a tool for adequate rehabilitation. This paper aims to provide a solution providing a concept for agricultural leprosy rehabilitation. In chapter five rehabilitation strategies for clients with agricultural background are lined out regarding the specific situation in Nepal. Possibilities...
